Task Scheduler Instructions

Make sure to configure the LubeLoggerBackup.ps1 file by editing the variables in the configuration section first!

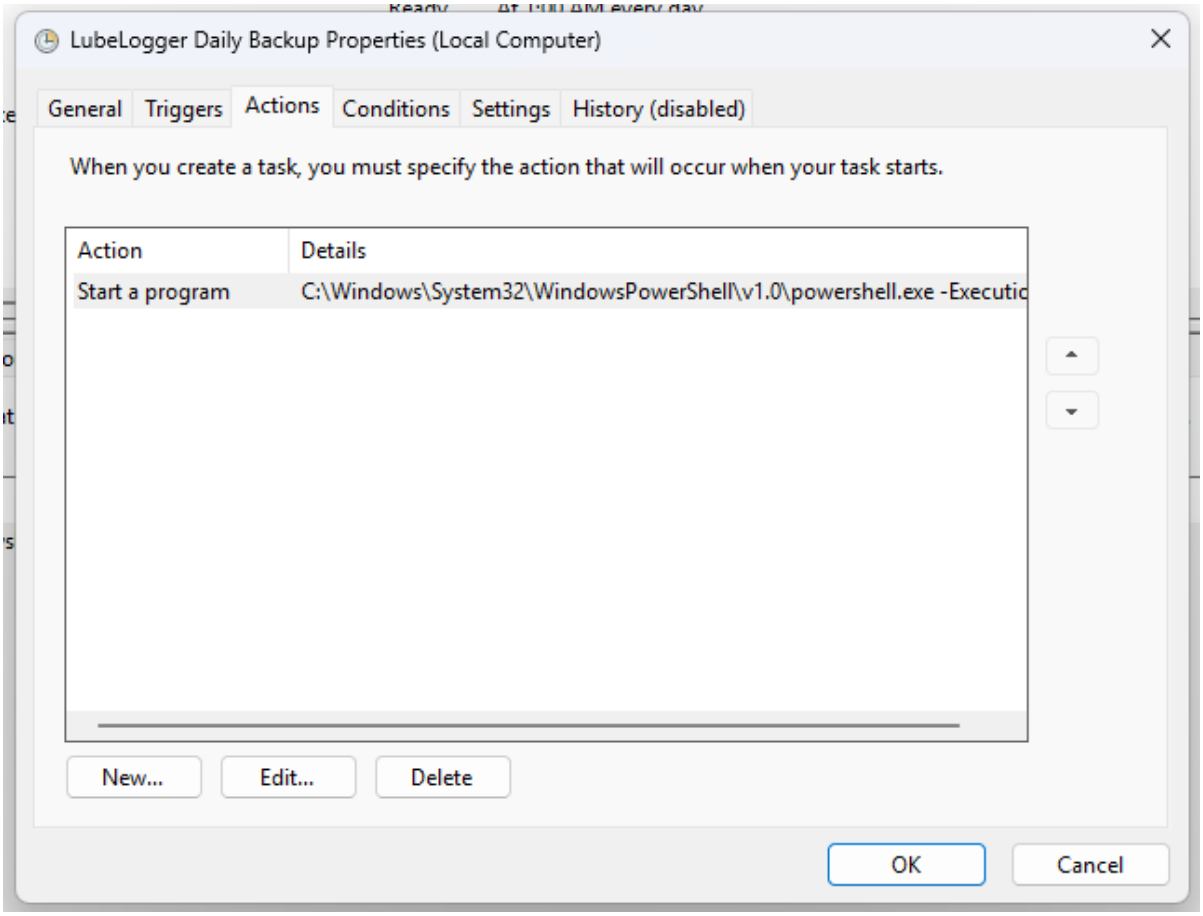

Open Task Scheduler and create a new task (not a basic task) then follow the example below:

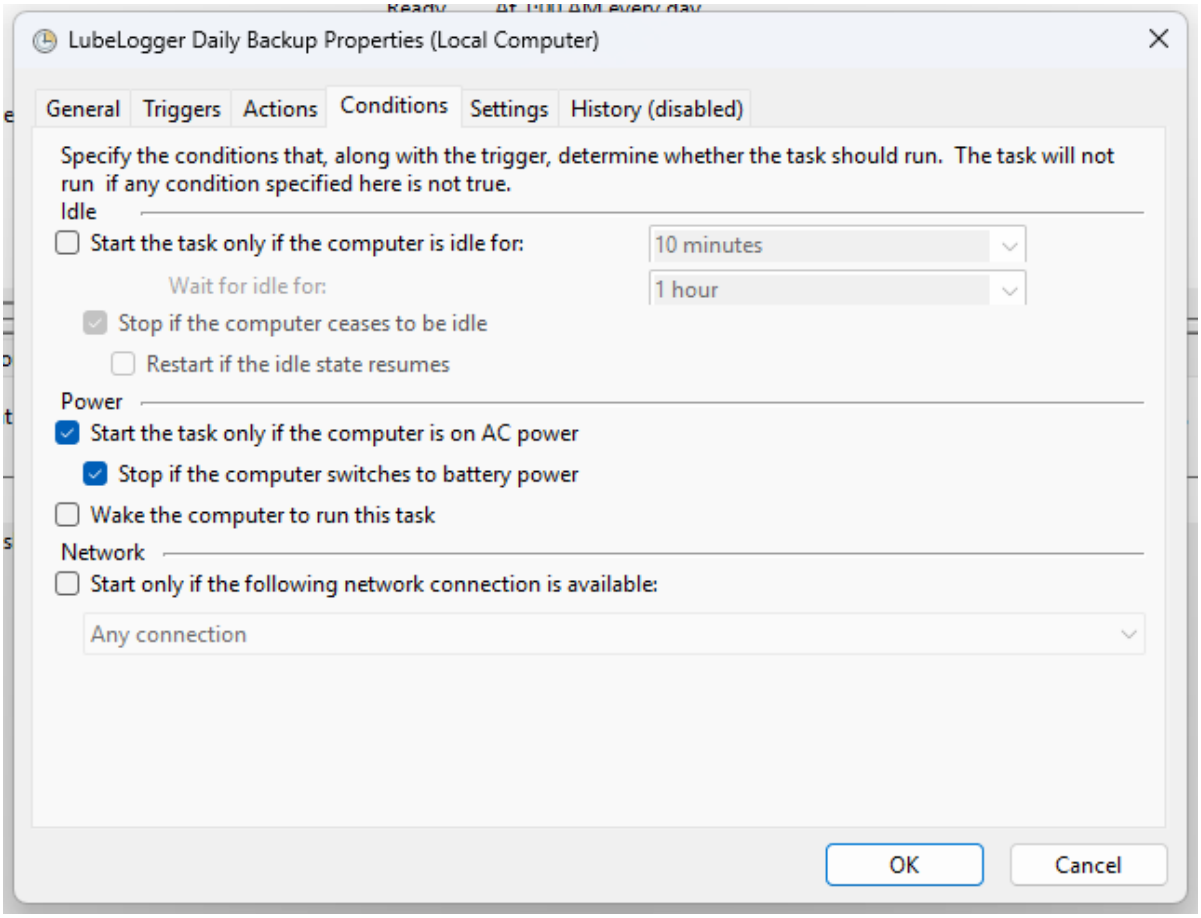

Check "Run whether user is logged on or not"
Check "Run with highest privileges"

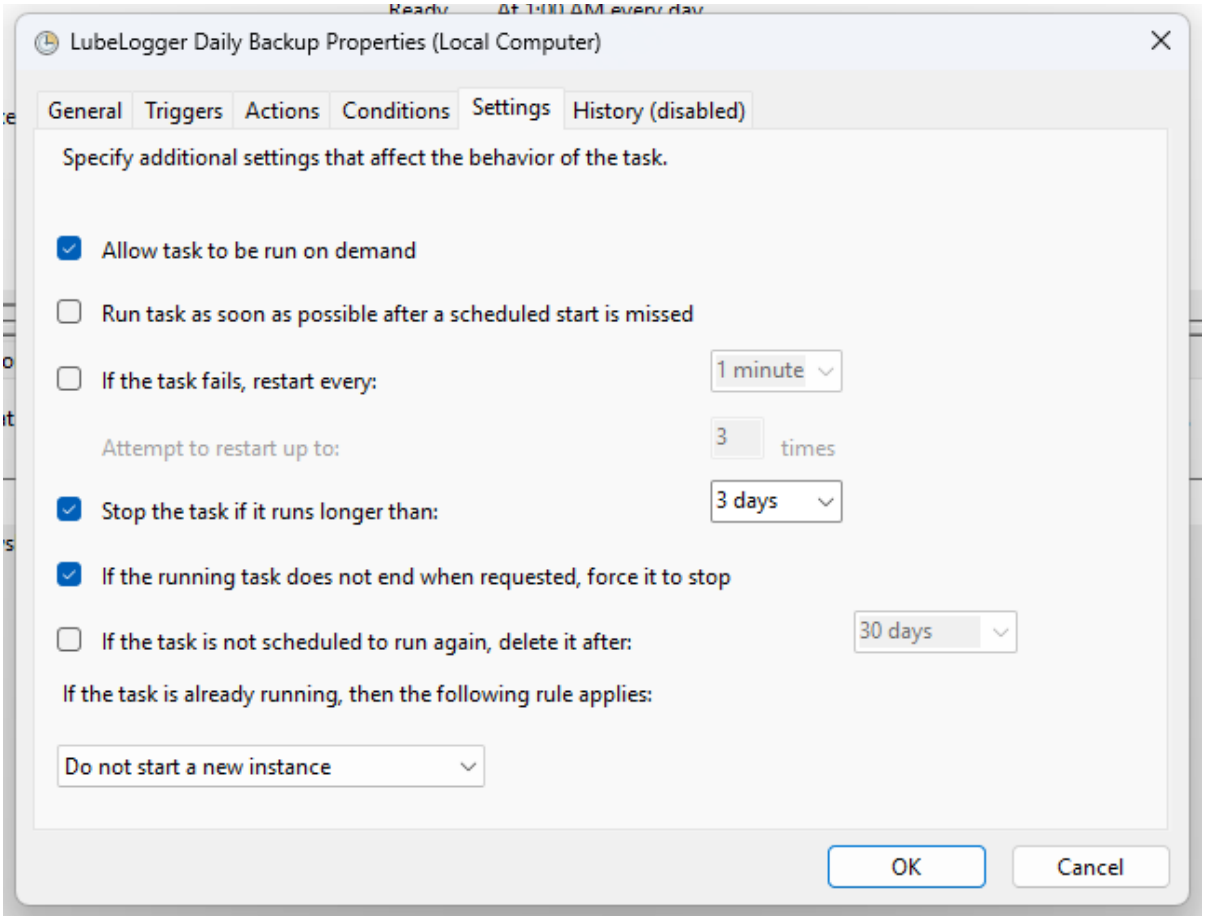

Create your schedule. Mine is daily but yours can be whatever you like.

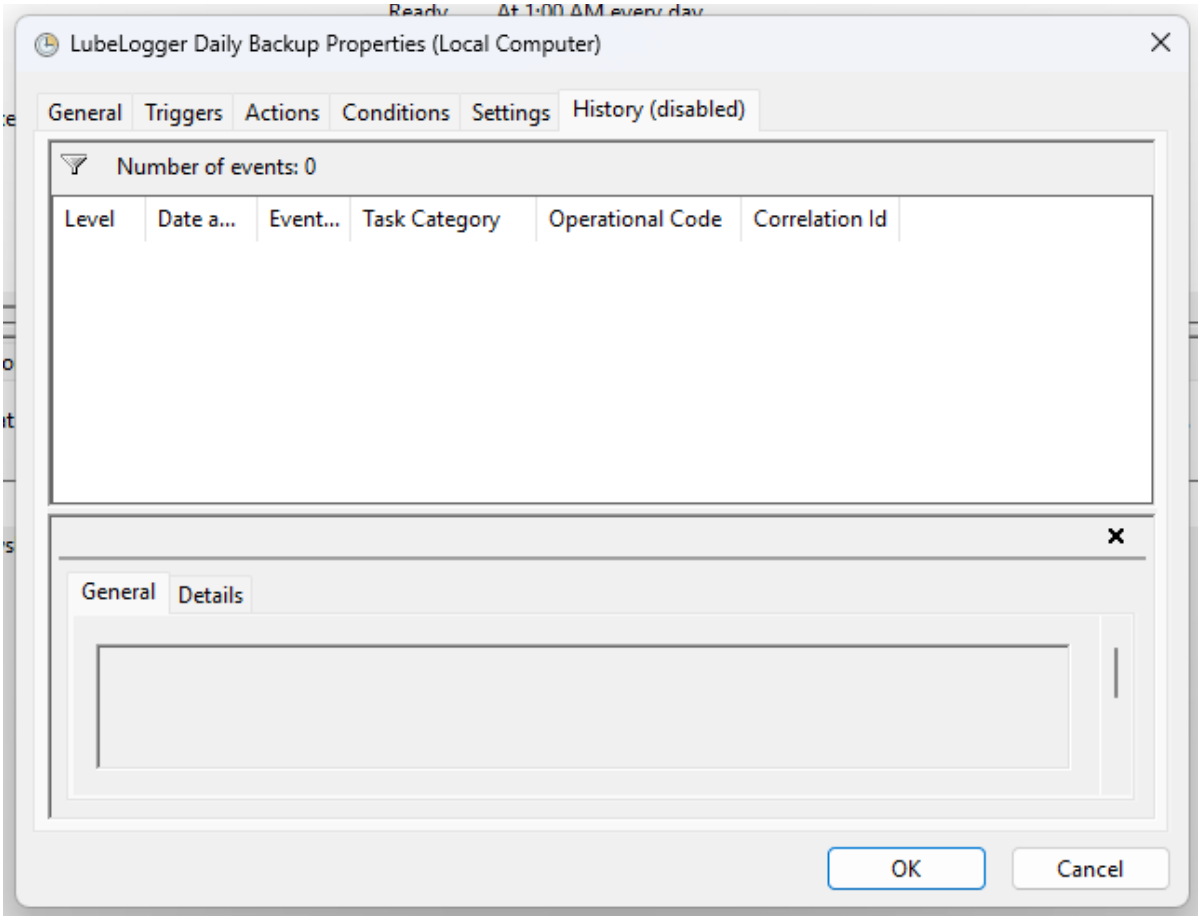

Create "New" with the following settings:
Program/script:
C:\Windows\System32\WindowsPowerShell\v1.0\powershell.exe
Add Arguments:
-ExecutionPolicy Bypass -NoProfile -NonInteractive -WindowStyle Hidden -File "C:\YOUR_SCRIPT_LOCATION\LubeLoggerBackup.ps1"

These should checked by default.

These should be check by default.

Nothing is needed here.

Save it. Then test it by right-clicking the task and hitting "Run".
